

## AIR TRAVEL

Modern jet liners burn fossil fuels to provide thrust, like jet fuel, that release carbon dioxide into the atmosphere

## DEFORESTATION

Deforestation is where areas are cleared of trees. This means there are fewer trees to remove carbon dioxide from the atmosphere through photosynthesis.

# CONTRIBUTING FACTORS TO GLOBAL WARMING

## CAR TRAVEL

Gas is a fossil fuel derived from crude oil. It is burned inside a car's engine to produce carbon dioxide.

## COAL POWER STATIONS

Coal power stations burn large amounts of coal to produce an electric current which we use in our homes, office, and factories.
